

DEVELOP OF WEB APPLICATION

Team ID : PNT2022TMID33222
Project : Smart Solutions For Railways

Tracking:

- A web application is developed using node red to track the live location of the train by receiving the latitude and longitude value of the location through GPS module.
- The received values will be updated in the IBM Watson IoT Platform through a python code.
- A node red is used to obtain the value form the IBM Watson IoT and to locate the values in the Map.
- When the python code is made to Run the Location is updated in IBM Watson IoT Platform with a delay of 3 seconds.

QR Code:

- In order to get the details of the journey of the passenger a node red flow is created
- Here the passenger must give their boarding and destination station and the seat also.
- The personal details like name and mobile number of the customer is obtained.
- All the details from the passenger is stored in IBM Cloudant DB.

Node-RED interface showing a flow for QR code generation and data storage.

Flow 1:

- Inputs:** "booking" button, "CLEAR" button, "Boarding Station" and "Destination Station" form fields.
- Processing:**
 - "Storing Data in DB" function node.
 - "QR Code Data" function node.
 - "grocode-gen" node.
 - "delay 15s" node.
 - "Empty Data" function node.
 - "mag payload" node.
 - "function" nodes for logic.
 - "show dialog" nodes for user feedback.
 - "template" node for QR code generation.
 - "m" node (message).
 - "switch" node.
 - "delay 2s" node.
 - "Seat" node.
 - "Boarding" and "Destination" function nodes.
- Outputs:** "show dialog" nodes.

Config Panel (On all flows):

- ibmiot
 - railway: 0
 - af445a5a7da096db: 1
- ui_base
 - Node-RED Dashboard
- ui_group
 - [Live Status] Tracking: 1
 - [QR Code] Reservat: 6
- ui_tab
 - Live Status: 1
 - QR Code: 1

Flow 1:
